

RADIANT BARRIER ENERGY SHEETING

There are two different ways of installing **Radiant Barrier Sheeting**. These methods are typically called “**Laid on the insulation**” and “**Stapled under the roof**”.

Each method may be more or less effective depending on the specific conditions and structure of each home. This determination can be made upon inspection of the attic and a discussion with the homeowner to help them select the best application for their home.

“The LAID Method”

“The STAPLED Method”

Pro's

- ✓ Simplest method of installation.
- ✓ Typically (1) day install
- ✓ Creates a complete reflective barrier over every inch of existing insulation
- ✓ Reflects 97% of the radiant heat entering your home through the attic

Pro's

- ✓ Easier to do future work in the attic without disturbing the radiant barrier
- ✓ Does not build up dust as easily
- ✓ Greatly reduces overall temperature in the attic, keeping ducting and HVAC equipment cooler
